VERDICT

PASS

EXPLANATION

PII matrix evaluation completed with 0 protected finding(s). raw detected values were omitted from this report

Teaching Mode

Learning about PII LEAKAGE

Overview

Applications

Practices

Q&A Prep

Evaluates PII handling across input, prompts, RAG context, tools, agent steps, final output, errors, logs, URLs, and telemetry. Missing authorization evidence is never treated as a pass.

ADVANTAGES

- Covers all 30 controls defined by the project PII matrix.
- Returns structured, traceable findings without reproducing raw values.
- Does not require an external LLM judge or API key.

LIMITATIONS

- Authorization and necessity require evidence from the host application.
- Free-text and inferred PII may require annotations or human review.
- Pattern detection must be regression-tested for regional identifier formats.

INDUSTRY USAGE

- Financial-services privacy and secrets validation.
- Healthcare and insurance assistant governance.
- Multi-tenant SaaS release and regression testing.

Teaching Mode

Learning about TOXICITY

Overview

Applications

Practices

Q&A Prep

Toxicity evaluates whether the model generates, endorses, amplifies, or unnecessarily repeats abusive, hateful, threatening, harassing, degrading, violent, sexual, discriminatory, or self-harm-encouraging content. It compares the user input with the response and accounts for quoted, educational, fictional, and safety contexts.

ADVANTAGES

Separates user-originated toxicity from model-generated toxicity.

Reports escalation, target, source, context, and severity.

Recognizes safe refusal, de-escalation, and legitimate sensitive discussion.

LIMITATIONS

Intent, sarcasm, and cultural context can remain ambiguous.

Judge-model quality affects nuanced classifications.

High-severity and uncertain findings still require human review.

INDUSTRY USAGE

Customer support and community moderation assistants.

Education, healthcare, HR, and workplace copilots.

Multi-step RAG agents processing untrusted documents and tool output.
